

Creating the energy transition.

The transformation of the energy system towards climate neutrality, resilient systems with green power generation and new gases, decarbonisation - these are the cornerstones of the enormous transformation process within the framework of the energy transition. Germany wants to be CO2 neutral by the end of 2045. Hardly anyone knows the insights and current developments of the German and international energy market as well as the 5-star speaker Dr. Timm Kehler. As Managing Director of the "Future Gas and Hydrogen" association, he is busy with the latest developments in seasonal supply security on a daily basis and is a sought-after interview partner for the press and TV. At the same time, he is working on complex issues of the energy mix and major strategic milestones towards the 2045 target. In his gripping and exciting keynote, Dr. Timm Kehler gives a motivating outlook for a new and energy-secure future.

Managing Director and Board Member of Zukunft Gas, the voice of the German gas and hydrogen industry

Expertise: Energy transition, energy market, climate neutrality

Languages: english, german
